

TabWare Best Practices Solution

TabWare Best Practices Solution combines the robust TabWare CMMS / EAM solution with documented maintenance best practices and consulting to deliver a pre-configured industry proven Best Practices software.

As you consider implementing or switching to a new CMMS or EAM solution, realize software functionality alone will not deliver ultimate value and savings for your organization. Instead of just implementing software and hoping your maintenance organization will maximize efficiencies and cost savings, TabWare Best Practices is delivered with both preconfigured and documented best practices all in one.

Typically, best practices are delivered through costly and lengthy consulting engagements with uncertain results and deliverables, but with TabWare Best Practices you get out-of-the-box tools and methodology in key areas, saving you time and money. AssetPoint has over 30 years of deep domain experience working with maintenance organizations and has developed a unique solution that combines maintenance best practices with the world class asset management solution, TabWare.

TabWare Best Practices keeps your maintenance organization compliant with the most up-to-date industry requirements by aligning with PAS 55 standards (which will become ISO 55000 industry standards). TabWare Best Practices will help you generate a quick and positive ROI for your CMMS/EAM project by providing substantial improvements in asset performance, reducing maintenance and material costs and risk exposure, improving labor productivity, and increasing operational equipment effectiveness (OEE).

TabWare Best Practices takes the guesswork out of your implementation by delivering a baseline best practices software tool and methodology in the following areas:

- Strategy** - Evolution of maintenance from reactive, preventive, and predictive strategies.
- Organization** - Recommended organizational structure to evolve to a world class maintenance organization.
- Processes** - Baseline processes for maintenance to ensure quality data collection.
- Standards** - Recommended data standards delivered out of the box with TabWare.
- Performance** - Required baseline metrics to measure and report adherence to best practices.
- Continuous Improvement** - Establish baseline results and measure progress for organizational improvement.
