Vincent Giordano Utilizes TabWare CMMS / EAM for Their Asset Management Needs

About Vincent Giordano:

The Vincent Giordano Corporation is a family owned and operated meat-processing company located in Philadelphia, Pennsylvania. In operation for over 40 years, they are a premier supplier of roast beef, corned beef and pastrami products to retail, food service, fast food and private label arenas. Vincent Giordano has a history of going well beyond what is mandated for product safety, and as part of their continued commitment, all cooked deli meats go through their revolutionary High Pressure Pasteurization (HPP) system. This offers customers and consumers the safest deli meats with an extended shelf life. The HPP process virtually eliminates all food borne pathogens and is chemical free.

"We chose the TabWare solution to manage our inventory and maintenance records for its demonstrated ease-of-use and cost-effectiveness. TabWare will work for us by capturing accurate maintenance information that helps prevent any unplanned downtime, and continually increases our high level of quality and safety standards. Also, since TabWare is a cloud computing solution, getting up and running couldn't be easier. This is very important to us, as Vincent Giordano Corp. has been HPP processing all of our products since November 2010, placing us ahead of the pack when it comes to food safety."

- Guy Giordano, CEO and President
Vincent Giordano Corporation

Challenges & Requirements:

- Software as a Service (SaaS) deployment option that is dependable and audit compliant
- Effectively manage their cutting-edge facilities and equipment
- A CMMS / EAM solution that is easy to use for maintenance personnel
- Help improve Safe Quality Food (SQF) standards
- CMMS / EAM partner with proven experience in the Food & Beverage industry

"TabWare will play a crucial role in sustaining our long-standing commitment to producing safe, quality products for our customers by giving us the leading-edge in asset management technology."
